

Sergiu Frunză — Python Backend Engineer

sergiu.frunza120@gmail.com · +373 78 496 209 · linkedin.com/in/sergiu-frunza · Chişinău, Moldova

Python engineer with 4+ years of experience building backend systems end-to-end — from clean **API design** to solid **data modeling**, **process automation** and reliable services in production. Pragmatic engineering on FastAPI and Django stacks.

EXPERIENCE

Python Developer — GlobalDatabase

Sep 2025 – now

- Designing crawling, data-collection and statistics services on FastAPI, asyncio and Kafka, running as concurrent workers on Kubernetes.
- Migrated a service from synchronous Django to **async FastAPI** to handle high request volume, redesigning structure and business logic.
- Built a **providers aggregator** consolidating data from multiple external APIs — minimizing API costs by caching and reusing responses across services.
- Developed a **continuous website parsing system** that scrapes and normalizes content via regex-based rules pipelines.
- Owned deployment via GitLab CI/CD and Kubernetes manifests; tuned Postgres for high-throughput ingestion.
- Built internal **dashboards** to monitor collection statistics, worker throughput and pipeline health.

Django Developer — Milzo.net · Freelance

Oct 2025 – now

- Integrated new endpoints and restructured legacy APIs for consistency and maintainability.
- Built endpoint logic for widgets.
- Optimized database queries, cutting response times on high-traffic endpoints.
- Ongoing improvement of endpoints and business logic — subscriptions, project creation and management, permissions.

Python Developer — Profit.com

Jul 2025 – Sep 2025

- Implemented **KYC workflows** and integrated **cryptocurrency payout systems** with secure, reliable transactions.
- Optimized schema design to improve SQL performance and reduce latency.
- Monitoring and debugging via **Portainer**.
- Monitoring and maintaining continuous parsers in **Airflow**.

Full-Stack Developer

Feb 2023 – May 2025

- Built responsive interfaces with **HTML, CSS, vanilla JavaScript** and **Vue**.
- Designed interfaces in **Figma**.
- Built **lead-capture systems** through interactive calculators.
- Designed and implemented relational and non-relational databases; performance tuning and efficient querying.
- Integrated third-party services — email, Slack alerts, AWS notifications — for monitoring and communication.
- Worked across **AWS** — RDS, CodeBuild, load balancers, CI/CD pipelines, Docker containers, S3 and CloudFront.
- Web scraping and data extraction feeding cleaned data into business workflows.

Python Developer — Freelance

Feb 2023 – May 2025

- Built an **AI-powered Telegram bot** for real-time alerts based on GPT message analysis.
- Developed asynchronous parsers with Playwright and aiohttp across multiple workers.
- Refactored backend services on FastAPI; Dockerized development and deployment.
- Continuous per-account statistics collection, with creation and semi-real-time updates of financial data in custom **Google Sheets** tables.

Python Developer — Medpark

- Built an **admin dashboard** for sending messages and emails to Medpark clients.

Python Developer — NeoComputer

- AI tool for enriching product data in multiple languages.
- Consulting on site optimization.
- The delivered service was deployed on their server.

SKILLS

languages	Python, JavaScript, SQL
frameworks	FastAPI, Django, asyncio, aiohttp, Aiogram, Pandas, Playwright
databases	PostgreSQL, Redis, MongoDB
messaging	Kafka, RabbitMQ, Celery
devops	Docker, Kubernetes, GitLab CI/CD, AWS, Portainer
tools	Git, Postman, Terminus, Lens, OpenAI
ide / hosting	PyCharm, GitLab, BitBucket

EDUCATION

Technical University of Moldova	2020 – 2024
B.Eng. Automation and Informatics — GPA 9.39 · Chişinău	
«Ion Creangă» High School	2017 – 2020
Natural Sciences Track — GPA 8.82 · Bălţi	

LANGUAGES

Romanian		C2
Russian		C1
English		A2
